1. API Format

APIs for integrating will be published as stateless REST API over HTTPS.

2. API Security

API security is applied at the network and application level. The application security can be explained as follows:

HTTPS: The communication between the API shall take place a secure https layer SSL protocol. This way communication will happen through a secure encrypted connection.

IP Whitelisting: Whitelisting of IP will be done at gateway level. This will ensure access control through network.
